Taiki Papandreou

Experience

AI Developer *Amsterdam, NL May 2026*
CribConnects *– Present*

- Sole engineer at a five-person AI consultancy; shipped 16 projects in 4 months across client delivery, internal products and pre-sales
- Deployed a Microsoft Teams AI assistant into a spa resort group's own Azure tenant **20 days** after first commit: inbox triage, cross-calendar scheduling, and a code-enforced confirmation gate on every outward action; 382 automated tests
- Sole engineer on a €39.500 six-week engagement for a Dutch insurer: rebuilt their outsourcing risk assessment as a web tool where an AI proposes each answer with its source and a deterministic engine computes the verdicts; CSV export byte-identical across all **330 columns** to their production platform
- Built the company's internal back office end to end (Node.js, Postgres): quoting, invoicing with an in-house PDF generator, its own e-signing flow, open-banking reconciliation, VAT returns and cookieless analytics; surfaced €94k in open invoices on first import
- Wrote two WBSO R&D grant applications without an adviser; one granted for **500 hours**

Freelance AI/ML Engineer *Amsterdam, NL Sept 2024*
TPL Company (ZZP) *– Present*

- Developed GenAI tool for language education at Lexicon Trainingen: transformed document creation process through automated CEFR level-aligned text simplification and exercise generation with Python and OpenAI APIs
- Built RAG-based legal assistance chatbot for Inloopspreekuuradvocaat: 70% autonomous resolution of 10,000+ annual inquiries using Microsoft Azure AI Foundry API with EU data compliance
- Implemented modular web applications with SQL databases, REST APIs, and CI/CD pipelines for production deployment

NLP Intern *Amsterdam, NL*
TNO *May 2022 – July 2022*

- Developed multi-phase NLP pipeline using RoBERTa for workplace accident detection in 300,000+ English and Dutch news articles, achieving 0.89 F1-score through contextual language understanding
- Created labeled dataset from scratch and implemented class imbalance management techniques, delivering scalable methodology for TNO's safety research and trend analysis

Education

Msc Artificial Intelligence *Sept 2023 – Aug 2025*
University of Amsterdam

- **Master Thesis**: Medical Text Simplification: From Jargon Detection to Automated Simplification (TSAR@ EMNLP 2025)
- Co-authored a peer-reviewed paper on fairness in Graph Neural Networks (TMLR@NeurIPS 2024)

Bsc in Artificial Intelligence, Honours program *Sept 2020 – Aug 2023*
University of Amsterdam

- **Bachelor thesis**: Integrating Crude Oil Price for Improved Stock Price Forecasting on Oil Companies using LSTM

Skills

Programming: Python, R, SQL, C, PHP
AI/ML: PyTorch, TensorFlow, Transformers, Azure AI Foundry, OpenAI APIs, Pandas, NumPy, OpenCV, SpaCy, NLTK
Cloud & Enterprise: Microsoft Azure, REST APIs, Streamlit, FastAPI
Languages: Dutch, English, Japanese
Interests: Rock climbing, CrossFit

Projects

- Enhanced a multimodal segmentation framework for 3D CT scans using foundation models (ViTs, CLIP), proposing group-equivariant features to improve robustness to rotation; validated state-of-the-art generalization on MRI data (SegVol)
- Built a real-time political bias detector using fine-tuned RoBERTa on GDELT news (88.9% accuracy without source features); introduced a "blindspot" metric to highlight asymmetric political coverage
- Stock price forecasting with multi-modal time series: Integrated crude oil price data with LSTM networks for oil company stock prediction, implementing feature engineering and temporal modeling techniques (Bachelor thesis project)

Publications

Medical Text Simplification: From Jargon Detection to Automated Simplification Nov 2025
